

~ JOIN US FOR THE EVENLODE WATERBLITZ ~

Help us to collect as much water quality data as possible!

Friday 30 September – Monday 3 October 2022

Our last event in July showed very high nutrient levels across the Evenlode catchment area. Over 70% of sampled sites were recorded with high nitrates, and 90% with high phosphates.

Earthwatch Europe are continuing their vital work within the Evenlode Catchment Partnership to monitor the River Evenlode and its tributaries, and we would like your help.

How do I get involved?

Visit our Events page to register an account with online data-sharing platform Esri and sign up to take part:

<https://www.freshwaterwatch.org/pages/events>

Free water testing kits will be sent to you after registration.
